

Commissioners:

I whole-heartedly support and encourage the Commission's adoption of Proceeding RM-10765. The wide-cast scheme to communicate with the populace, using time-tested, robust and reliable Baudot character coding, is a viable and efficient means of transmission. The wide spread, low cost availability of computers, receivers and software, some of which is free, renders this plan exceptionally viable. The time-tested, well proven technology of HF Baudot communications is known to be extremely reliable under very adverse conditions and would be useful in the event that methods utilizing higher technology but more fragile survivability are rendered unusable.

I urge the Commission Members to adopt the subject Proposal.

Respectfully submitted,

James H. Young, W8MAQ
